

Steps for Execution:

1. Verify Docker Images

- Run the command:

```
sh
CopyEdit
docker images
```

- Confirm the presence of required images:
 - mahashwin/java-maven
 - mahashwin/ecommerce
 - nginx
 - hello-world
 - gcr.io/k8s-minikube/kicbase
 - node:alpine3.17
- If any required image is missing, pull it using:

```
sh
CopyEdit
docker pull <image_name>
```

2. Run Java-Maven Container

- Start the container with:

```
sh
CopyEdit
docker run -d -p 8090:8080 mahashwin/java-maven
```

- Check running containers:

```
sh
CopyEdit
docker ps
```

- Ensure the application is accessible at <http://localhost:8090>.

3. Build Docker Image for Java-Maven

- Navigate to the project directory and build the image:

```
sh
CopyEdit
docker build -t mahashwin/java-maven .
```

- Verify the image is built successfully:

```
sh
```

```
CopyEdit
docker images | grep java-maven
```

4. Deploy with Jenkins

- Ensure Jenkins is running.
- Check the pipeline execution:
 - The build logs show:
 - Step 4/4 : CMD ["catalina.sh", "run"]
 - **Successfully tagged** mahashwin/java-maven:latest
 - This confirms that the image is built and tagged correctly.

5. Verify Jenkins Build Status

- Open Jenkins Dashboard (<http://localhost:8080>).
- Check the project status:
 - java-maven pipeline execution was **successful**.
- Ensure no pending builds in the queue.

6. Verify Application Deployment

- Open <http://localhost:8090> in a browser.
- Ensure the application loads without errors.
